

The Enginasion Solution is the Process

We explore the technologies that are available to solve the problem and find a unique solution that is cost effective and efficient.

Design

The start of any design is the Discovery Phase.

Engineering

We bring multiple technologies of hardware, software and mechanics together to solve the problem.

Prototyping

We will build a working model to determine the feasibility of the engineering.

Consulting

We don't fix symptoms.
We fix problems.
Finding the real problem is the key to innovation.

Production

We provide limited production and manufacturing services to fulfill the low volume needs of our clients.

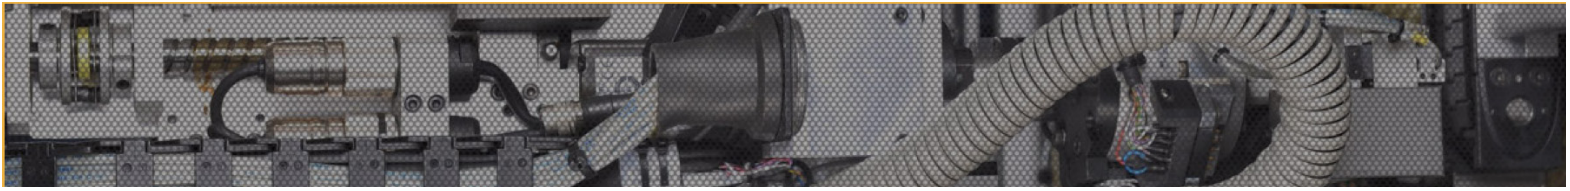

The technology solution had to be simple yet reliable. There was only one outsourcing choice for us: Enginasion.

Multiple Industries Depend on Enginasion

As Experts in the Impossible, our unique approach to solutions has given us experience over the past 20 years in a variety of industries and technologies.

Medical Devices

Medical devices and instrumentation is an emerging market requiring innovative solutions to new challenges.

Defense

Enginasion creates solutions for the highly complex problems required by the defense and military complex.

Industrial

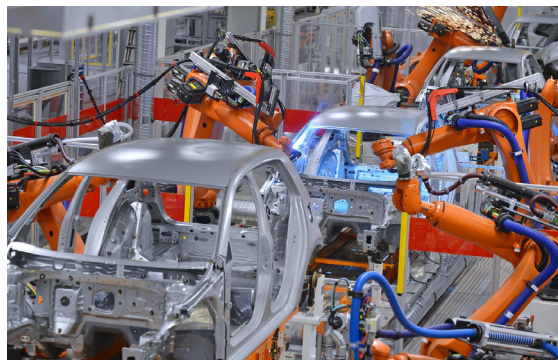

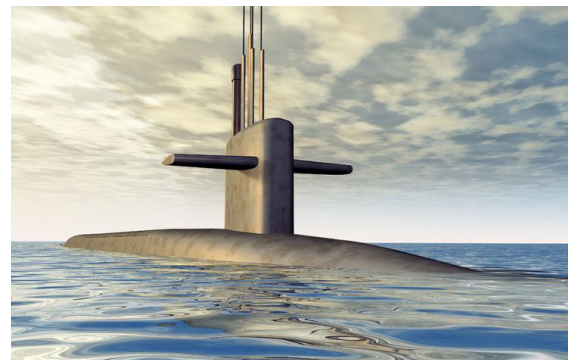

Automation and precision combined with efficiency of process are requirements for industrial manufacturing challenges.

BioPharma

Enginasion has created unique and precision automation tools for accurate production of pharmaceuticals.

M2M

Enginasion is playing a critical role in the development of data acquisition in the emerging Machine to Machine environment.

Enginasion is the perfect solution for us without our own in-house resources to develop software and hardware enhancements.
