

Industrial Case Study

GE Energy continues to count on Enginasion

to provide innovative Quality Control Solutions to meet emerging market needs for GE Energy for over 20 years.

GE Energy relies on Enginasion for imagination, creativity and outside-the-box approach to problem solving.

PROJECT

GE Energy, who is at the forefront of the Smart Grid deployments, has relied on Enginasion to develop a wide variety of quality verification systems for a number of different products that are manufactured internationally.

OVERVIEW

For two decades Enginasion has helped to fortify GE's reputation for their single and poly-phase meters, which are known for robustness and superior quality. Enginasion builds custom test equipment and co-authors the specifications. In the industry, this is an interesting and unusual combination that facilitates the manufacture of products internationally with stateside validation.

Experts in the Impossible.

Enginasion has been solving some of the most complex automation, control electronics, embedded software, and/or integrated product development challenges in the medical, defense, and pharmaceutical industries for 20 years.

The best engineers partner with us during any phase of a project cycle and in any capacity that best serves their needs. Benefits range from consulting to serving as an extension of an existing department or as complete, outsourced engineering, R&D and low volume manufacturing asset.
